MAKE TEN TO ADD

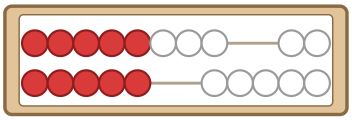

Name: ..... **Date:** .....

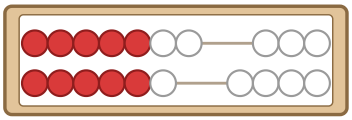

Fill the top row up to ten first, then add what is left over. Write how many beads you moved up to ten, how many were left, and the total.

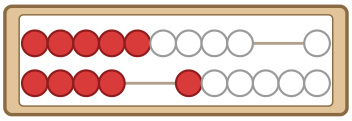

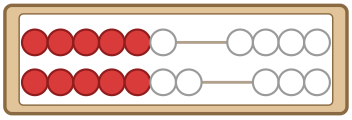

8 + 5. The top row has eight. It needs **two** more to be ten, so take two of the five from the bottom row: that makes **10**, and **three** are left over. 10 and 3 is **13**.

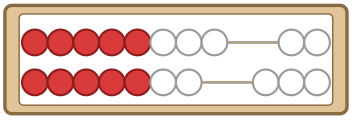

8 + 5 = 8 + 2 + 3 = 10 + 3 = 13

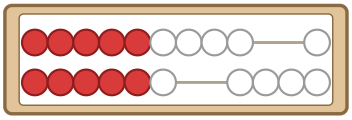

1.  **8 + 5** → **8 +** ☐ **= 10 and 10 +** ☐ **=** ☐

2.  **7 + 6** → **7 +** ☐ **= 10 and 10 +** ☐ **=** ☐

3.  **9 + 4** → **9 +** ☐ **= 10 and 10 +** ☐ **=** ☐

4.  **6 + 7** → **6 +** ☐ **= 10 and 10 +** ☐ **=** ☐

5.  **8 + 7** → **8 +** ☐ **= 10 and 10 +** ☐ **=** ☐

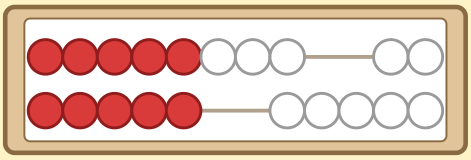

6.  **9 + 6** → **9 +** ☐ **= 10 and 10 +** ☐ **=** ☐

This is the whole reason a rekenrek is better than counters for this step: the full top row is ten whether you count it or not, so the child can see the ten and the leftovers at the same time.

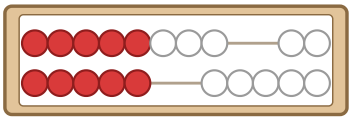

MAKE TEN TO ADD ANSWER KEY

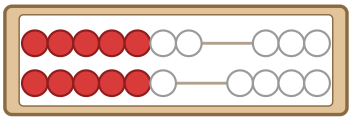

Name: ..... **Date:** .....

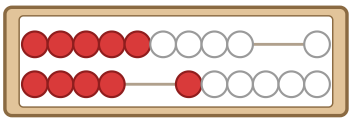

Fill the top row up to ten first, then add what is left over. Write how many beads you moved up to ten, how many were left, and the total.

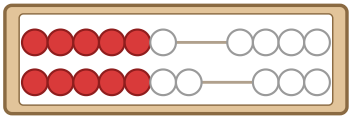

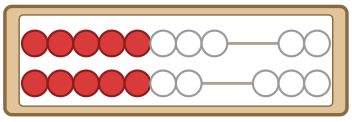

8 + 5. The top row has eight. It needs **two** more to be ten, so take two of the five from the bottom row: that makes **10**, and **three** are left over. 10 and 3 is **13**.
8 + 5 = 8 + 2 + 3 = 10 + 3 = 13

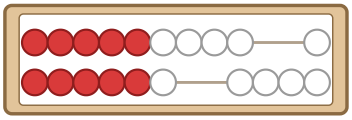

1.  **8 + 5** → **8 +** **2** **= 10 and 10 +** **3** **=** **13**

2.  **7 + 6** → **7 +** **3** **= 10 and 10 +** **3** **=** **13**

3.  **9 + 4** → **9 +** **1** **= 10 and 10 +** **3** **=** **13**

4.  **6 + 7** → **6 +** **4** **= 10 and 10 +** **3** **=** **13**

5.  **8 + 7** → **8 +** **2** **= 10 and 10 +** **5** **=** **15**

6.  **9 + 6** → **9 +** **1** **= 10 and 10 +** **5** **=** **15**

This is the whole reason a rekenrek is better than counters for this step: the full top row is ten whether you count it or not, so the child can see the ten and the leftovers at the same time.
