LAMINATE TOKEN KIT

Name: ..... **Date:** .....

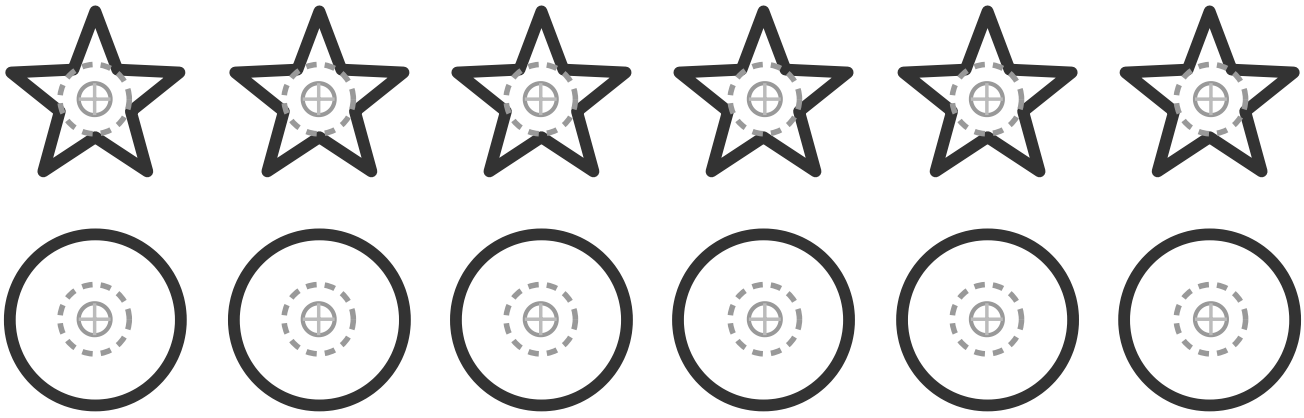

Print on card, laminate, then stick the hook (rough) side of a 16 mm Velcro dot on each marked circle: one in the reward box and one in the middle of every token space. Put the loop (soft) side on the back of the twelve tokens at the bottom. One board then lasts a whole year of boards.

I AM WORKING FOR

FIVE TOKEN SPACES, DOT MARKED

TWELVE REUSABLE TOKENS: DOT GOES ON THE BACK

Laminate before you cut, leave a 2 mm clear edge around each token, and round the corners. An unrounded laminated corner is sharp enough to scratch.

Cut the twelve tokens apart. Keep spares: a token board with three tokens left in the envelope stops mid-morning.
