ADDING FRACTIONS: UNLIKE DENOMINATORS (1)

Name: ..... **Date:** .....

One denominator is a multiple of the other, so change only the fraction with the smaller denominator. Then add the numerators.

1. $\frac{2}{9} + \frac{2}{3} =$ ____

2. $\frac{3}{6} + \frac{2}{3} =$ ____

3. $\frac{2}{9} + \frac{1}{3} =$ ____

4. $\frac{7}{8} + \frac{2}{4} =$ ____

5. $\frac{1}{2} + \frac{3}{6} =$ ____

6. $\frac{6}{9} + \frac{2}{3} =$ ____

7. $\frac{4}{5} + \frac{14}{15} =$ ____

8. $\frac{4}{5} + \frac{3}{10} =$ ____

9. $\frac{4}{12} + \frac{3}{4} =$ ____

10. $\frac{7}{12} + \frac{3}{6} =$ ____

11. $\frac{1}{4} + \frac{5}{8} =$ ____

12. $\frac{1}{2} + \frac{1}{4} =$ ____

Example: $\frac{1}{3} + \frac{1}{6}$. Sixths are the smaller pieces, so $\frac{1}{3} = \frac{2}{6}$. Then $\frac{2}{6} + \frac{1}{6} = \frac{3}{6} = \frac{1}{2}$.

Answers: in lowest terms; write answers of 1 or more as mixed numbers.

ADDING FRACTIONS: UNLIKE DENOMINATORS (1) ANSWER KEY

Name: ..... Date: .....

One denominator is a multiple of the other, so change only the fraction with the smaller denominator. Then add the numerators.

1. $\frac{2}{9} + \frac{2}{3} = \frac{8}{9}$
2. $\frac{3}{6} + \frac{2}{3} = 1\frac{1}{6}$
3. $\frac{2}{9} + \frac{1}{3} = \frac{5}{9}$
4. $\frac{7}{8} + \frac{2}{4} = 1\frac{3}{8}$
5. $\frac{1}{2} + \frac{3}{6} = 1$
6. $\frac{6}{9} + \frac{2}{3} = 1\frac{1}{3}$
7. $\frac{4}{5} + \frac{14}{15} = 1\frac{11}{15}$
8. $\frac{4}{5} + \frac{3}{10} = 1\frac{1}{10}$
9. $\frac{4}{12} + \frac{3}{4} = 1\frac{1}{12}$
10. $\frac{7}{12} + \frac{3}{6} = 1\frac{1}{12}$
11. $\frac{1}{4} + \frac{5}{8} = \frac{7}{8}$
12. $\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$
