COMPARING FRACTIONS: WORD PROBLEMS

Name: ..... **Date:** .....

Read each problem, decide which fraction is bigger, and write a sentence that says who or which, and how you know. Show any renaming you did.

1. Mia ate $\frac{3}{8}$ of a pizza and Leo ate $\frac{3}{4}$ of a pizza the same size. Who ate more?

2. Two ribbons are the same length. Ava used $\frac{2}{3}$ of hers and Sam used $\frac{2}{5}$ of his. Who used more ribbon?

3. Noah has read $\frac{5}{6}$ of his book. Ella has read $\frac{7}{12}$ of a book with the same number of pages. Who has read more?

4. One water bottle is $\frac{1}{2}$ full. Another bottle the same size is $\frac{4}{10}$ full. Which bottle has more water?

5. Zoe ran $\frac{3}{4}$ of a mile. Ben ran $\frac{2}{3}$ of a mile. Who ran farther, and by what fraction of a mile?

6. Three friends shared a chocolate bar. Amir got $\frac{1}{3}$, Priya got $\frac{1}{4}$ and Tom got $\frac{5}{12}$. Put them in order from the least chocolate to the most.

COMPARING FRACTIONS: WORD PROBLEMS ANSWER KEY

Name: ..... **Date:** .....

Read each problem, decide which fraction is bigger, and write a sentence that says who or which, and how you know. Show any renaming you did.

1. Mia ate $\frac{3}{8}$ of a pizza and Leo ate $\frac{3}{4}$ of a pizza the same size. Who ate more?

Leo. $\frac{3}{4} = \frac{6}{8}$, and $\frac{6}{8} > \frac{3}{8}$.

2. Two ribbons are the same length. Ava used $\frac{2}{3}$ of hers and Sam used $\frac{2}{5}$ of his. Who used more ribbon?

Ava. Same numerator, and thirds are bigger pieces than fifths, so $\frac{2}{3} > \frac{2}{5}$.

3. Noah has read $\frac{5}{6}$ of his book. Ella has read $\frac{7}{12}$ of a book with the same number of pages. Who has read more?

Noah. $\frac{5}{6} = \frac{10}{12}$, and $\frac{10}{12} > \frac{7}{12}$.

4. One water bottle is $\frac{1}{2}$ full. Another bottle the same size is $\frac{4}{10}$ full. Which bottle has more water?

The first bottle. Half of 10 is 5 and 4 < 5, so $\frac{4}{10}$ is less than $\frac{1}{2}$.

5. Zoe ran $\frac{3}{4}$ of a mile. Ben ran $\frac{2}{3}$ of a mile. Who ran farther, and by what fraction of a mile?

Zoe. $\frac{3}{4} = \frac{9}{12}$ and $\frac{2}{3} = \frac{8}{12}$, so Zoe ran $\frac{1}{12}$ of a mile farther.

6. Three friends shared a chocolate bar. Amir got $\frac{1}{3}$, Priya got $\frac{1}{4}$ and Tom got $\frac{5}{12}$. Put them in order from the least chocolate to the most.

Priya ($\frac{3}{12}$), Amir ($\frac{4}{12}$), Tom ($\frac{5}{12}$).
