SHADE THE HUNDREDTHS GRID

Name: ..... **Date:** .....

Each big square is one whole cut into 100 small squares, so each small square is one hundredth (0.01). Shade the decimal, then write it as a fraction over 100.

Worked example: 0.37 means 37 hundredths: shade 37 small squares (three full rows of ten, then seven more) and write $\frac{37}{100}$. 0.40 is four full rows, $\frac{40}{100}$, which is the same as 0.4.

1 0.37

fraction: $\frac{\square}{100}$

2 0.48

fraction: $\frac{\square}{100}$

3 0.79

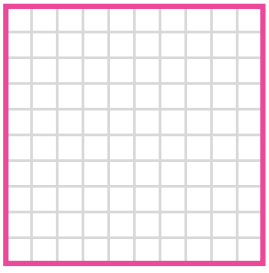

fraction: $\frac{\square}{100}$

4 0.94

fraction: $\frac{\square}{100}$

5 0.33

fraction: $\frac{\square}{100}$

6 0.59

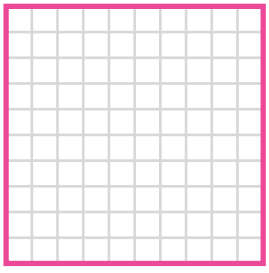

fraction: $\frac{\square}{100}$

7 0.84

fraction: $\frac{\square}{100}$

8 0.69

fraction: $\frac{\square}{100}$
