FRACTIONS TO DECIMALS AND BACK

Name: ..... **Date:** .....

Tenths and hundredths convert straight across: 7/10 is 0.7 and 45/100 is 0.45. For halves and quarters, first rename the fraction with a denominator of 100. Decimals go back to fractions the same way, then simplify.

Worked example: $\frac{3}{4} = \frac{75}{100}$ = 0.75, because 4 × 25 = 100 and 3 × 25 = 75. Going back: 0.6 = $\frac{6}{10} = \frac{3}{5}$ after dividing top and bottom by 2.

FRACTION TO DECIMAL

1. $\frac{7}{10}$ = ____
2. $\frac{1}{2}$ = ____
3. $\frac{60}{100}$ = ____
4. $\frac{1}{4}$ = ____
5. $\frac{45}{100}$ = ____
6. $\frac{9}{100}$ = ____
7. $\frac{3}{4}$ = ____
8. $\frac{3}{10}$ = ____

DECIMAL TO FRACTION (IN LOWEST TERMS)

9. 0.9 = ____
10. 0.6 = ____
11. 0.35 = ____
12. 0.75 = ____
13. 0.1 = ____
14. 0.25 = ____
15. 0.5 = ____
16. 0.08 = ____
