THE TEN SOLIDS

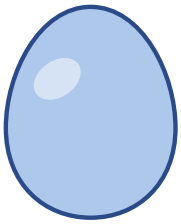

Name: ..... **Date:** .....

The ten geometric solids of the Montessori set. Say the name as you pick each one up, feel it with both hands and with your eyes closed, then try to roll it, slide it and stack it.

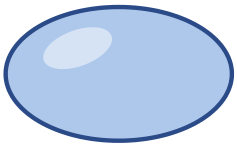

Sphere

One curved surface, no flat face at all

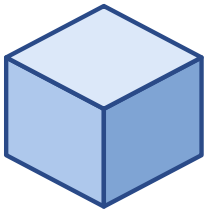

Ovoid

Egg shaped: wider at one end, rolls in a curve

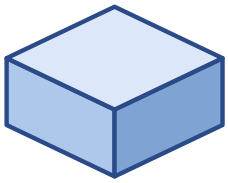

Ellipsoid

Like a stretched sphere, same at both ends

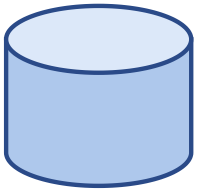

Cube

Six square faces, all the same size

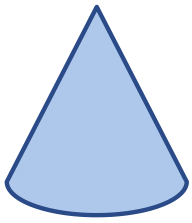

Cuboid

Rectangular prism: six rectangular faces

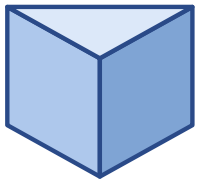

Cylinder

Two circles and one curved surface

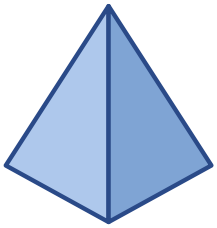

Cone

One circle, one curved surface, one point

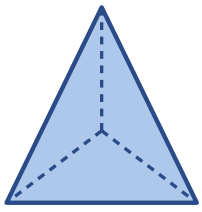

Triangular prism

Two triangles and three rectangles

Square-based pyramid

One square and four triangles

Triangular-based pyramid

Four triangles, the smallest solid of all

FLAT FACE
A flat surface you could stand the solid on, like one side of a cube.

EDGE
The line where two faces meet. A cube has twelve of them.

VERTEX
A corner where edges meet. The plural is vertices. A cone has one.

The wooden solids are all painted the same blue so that nothing but the shape tells them apart. Keep the three curved solids (sphere, ovoid, ellipsoid) together, then the two that only slide and stack, then the ones with a point.
