LONG LABEL STRIPS

Name: ..... **Date:** .....

Eight full-width label strips, 160 by 17 mm. The 78 mm label card fits a word like "petal" and runs out of room on "curvilinear triangle", "equilateral triangle", "obtuse angled scalene triangle" or "Monera". These strips take about twenty-four letters at a readable size.

A long label will no longer sit under the picture on a 78 mm card, so lay it alongside instead, or print the picture cards on the wide-format sheet in this pack and the strip lines up underneath exactly. Geometry, grammar boxes and the classification sets are where long words turn up most.
