HOW TO ASSEMBLE

Name: ..... **Date:** .....

A wall height chart from 24 in (61 cm) to 60 in (152 cm) in four strips. Follow the five steps, then keep the record page nearby so every measurement gets written down.

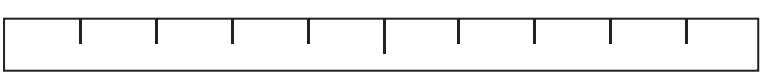

WHAT YOU NEED

- ☐ the strips page (2 sheets)
- ☐ scissors
- ☐ clear tape
- ☐ a tape measure
- ☐ a pencil to mark heights
- ☐ a flat book

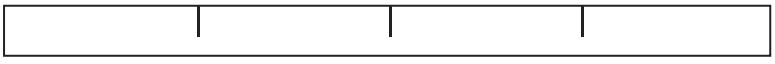

PUT IT TOGETHER

1. **Print at 100%.** Print the strips page at actual size (not "fit to page"). Check with the bars at the bottom of this page: they must measure exactly 10 cm and 4 in.
2. **Cut.** Cut each strip on its solid black outline. Keep the gray glue tab at the top of strips 1 to 3.
3. **Join.** Lay strip 2 so its bottom edge sits exactly on the thick line of strip 1's tab (the 33 in / 83.8 cm line), and tape it. Repeat for strips 3 and 4.
4. **Hang.** Tape the chart to a wall or door so the bottom edge of strip 1 is exactly 24 in (61 cm) above the floor. Measure up from the floor with a tape measure before taping.
5. **Measure.** Shoes off, heels against the wall. Rest a book flat on the head, mark where it meets the chart and write the name and date beside the mark.

PRINT CHECK: MEASURE THESE BARS WITH A RULER

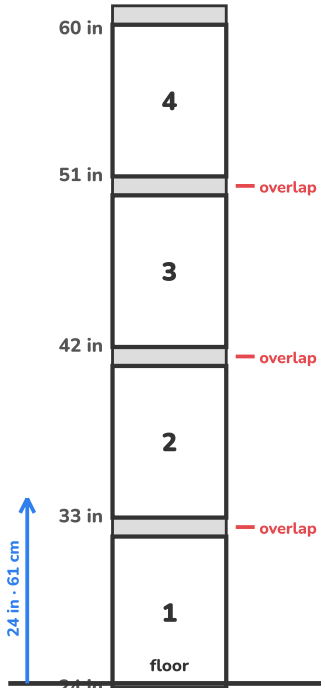

exactly **10 cm** (3.94 in)

exactly **4 in** (10.16 cm)

If a bar is shorter or longer, the print was scaled: print again at 100% / actual size with "fit to page" off.
