Name: ..... **Date:** .....

Divide numerator and denominator by any factor they share. Keep going until they share nothing but 1. Dividing by the biggest shared factor gets there in one step.

1. $\frac{21}{24} =$ ☐
2. $\frac{5}{25} =$ ☐
3. $\frac{20}{24} =$ ☐
4. $\frac{12}{14} =$ ☐
5. $\frac{10}{14} =$ ☐
6. $\frac{2}{10} =$ ☐
7. $\frac{6}{12} =$ ☐
8. $\frac{15}{33} =$ ☐
9. $\frac{3}{6} =$ ☐
10. $\frac{9}{15} =$ ☐
11. $\frac{6}{27} =$ ☐
12. $\frac{6}{18} =$ ☐
13. $\frac{4}{18} =$ ☐
14. $\frac{24}{30} =$ ☐
15. $\frac{2}{14} =$ ☐
16. $\frac{10}{15} =$ ☐

Worked example: $\frac{12}{16}$: divide by 4, $\frac{12}{16} = \frac{3}{4}$. Dividing by 2 twice ($\frac{6}{8}$, then $\frac{3}{4}$) gives the same answer.

Name: ..... Date: .....

Divide numerator and denominator by any factor they share. Keep going until they share nothing but 1. Dividing by the biggest shared factor gets there in one step.

1. $\frac{21}{24} = \frac{7}{8}$
2. $\frac{5}{25} = \frac{1}{5}$
3. $\frac{20}{24} = \frac{5}{6}$
4. $\frac{12}{14} = \frac{6}{7}$
5. $\frac{10}{14} = \frac{5}{7}$
6. $\frac{2}{10} = \frac{1}{5}$
7. $\frac{6}{12} = \frac{1}{2}$
8. $\frac{15}{33} = \frac{5}{11}$
9. $\frac{3}{6} = \frac{1}{2}$
10. $\frac{9}{15} = \frac{3}{5}$
11. $\frac{6}{27} = \frac{2}{9}$
12. $\frac{6}{18} = \frac{1}{3}$
13. $\frac{4}{18} = \frac{2}{9}$
14. $\frac{24}{30} = \frac{4}{5}$
15. $\frac{2}{14} = \frac{1}{7}$
16. $\frac{10}{15} = \frac{2}{3}$
