SIMPLIFY, THEN COMPARE

Name: ..... **Date:** .....

Simplify both fractions first; the smaller numbers are easier to compare. Then write <, > or = between them.

1. $\frac{6}{15} = \square \; \square \; \square = \frac{4}{20}$
2. $\frac{2}{12} = \square \; \square \; \square = \frac{4}{6}$
3. $\frac{6}{9} = \square \; \square \; \square = \frac{8}{20}$
4. $\frac{16}{20} = \square \; \square \; \square = \frac{12}{16}$
5. $\frac{9}{12} = \square \; \square \; \square = \frac{4}{24}$
6. $\frac{4}{8} = \square \; \square \; \square = \frac{2}{6}$
7. $\frac{2}{4} = \square \; \square \; \square = \frac{2}{4}$
8. $\frac{4}{8} = \square \; \square \; \square = \frac{6}{9}$

Worked example: $\frac{6}{9}$ and $\frac{9}{12}$: $\frac{6}{9} = \frac{2}{3}$ and $\frac{9}{12} = \frac{3}{4}$. In twelfths, $\frac{8}{12} < \frac{9}{12}$, so $\frac{6}{9} < \frac{9}{12}$.

SIMPLIFY, THEN COMPARE ANSWER KEY

Name: ..... Date: .....

Simplify both fractions first; the smaller numbers are easier to compare. Then write <, > or = between them.

1. $\frac{6}{15} = \frac{2}{5} > \frac{1}{5} = \frac{4}{20}$
2. $\frac{2}{12} = \frac{1}{6} < \frac{2}{3} = \frac{4}{6}$
3. $\frac{6}{9} = \frac{2}{3} > \frac{2}{5} = \frac{8}{20}$
4. $\frac{16}{20} = \frac{4}{5} > \frac{3}{4} = \frac{12}{16}$
5. $\frac{9}{12} = \frac{3}{4} > \frac{1}{6} = \frac{4}{24}$
6. $\frac{4}{8} = \frac{1}{2} > \frac{1}{3} = \frac{2}{6}$
7. $\frac{2}{4} = \frac{1}{2} = \frac{1}{2} = \frac{2}{4}$
8. $\frac{4}{8} = \frac{1}{2} < \frac{2}{3} = \frac{6}{9}$
