SUBTRACTING FRACTIONS: UNLIKE DENOMINATORS

Name: ..... **Date:** .....

Rename both fractions with the lowest common denominator, then subtract the numerators. Simplify the answer.

Worked example: $\frac{5}{6} - \frac{1}{4}$. LCD of 6 and 4 is 12. $\frac{5}{6} = \frac{10}{12}$ and $\frac{1}{4} = \frac{3}{12}$, so the difference is $\frac{7}{12}$.
