# SUBTRACTING MIXED NUMBERS (BORROWING)

**Name:** ..... **Date:** .....

Here the first fraction is smaller than the second, so borrow 1 from the whole number and rename it with the same denominator before subtracting.

**Worked example:** $4\frac{1}{5} - 1\frac{3}{5}$. Borrow: $4\frac{1}{5} = 3\frac{6}{5}$. Then $3\frac{6}{5} - 1\frac{3}{5} = 2\frac{3}{5}$.

1. $6\frac{1}{5} - 3\frac{3}{5} =$ ____

2. $3\frac{8}{10} - 1\frac{9}{10} =$ ____

3. $6\frac{1}{3} - 3\frac{2}{3} =$ ____

4. $7\frac{1}{5} - 1\frac{4}{5} =$ ____

5. $5\frac{1}{3} - 3\frac{2}{3} =$ ____

6. $4\frac{1}{3} - 2\frac{2}{3} =$ ____

7. $8\frac{2}{4} - 4\frac{3}{4} =$ ____

8. $8\frac{1}{8} - 6\frac{4}{8} =$ ____

9. $6\frac{1}{3} - 4\frac{2}{3} =$ ____

10. $5\frac{5}{10} - 1\frac{6}{10} =$ ____

# SUBTRACTING MIXED NUMBERS (BORROWING) ANSWER KEY

**Name:** ..... **Date:** .....

Here the first fraction is smaller than the second, so borrow 1 from the whole number and rename it with the same denominator before subtracting.

1. $6\frac{1}{5} - 3\frac{3}{5} = 2\frac{3}{5}$
2. $3\frac{8}{10} - 1\frac{9}{10} = 1\frac{9}{10}$
3. $6\frac{1}{3} - 3\frac{2}{3} = 2\frac{2}{3}$
4. $7\frac{1}{5} - 1\frac{4}{5} = 5\frac{2}{5}$
5. $5\frac{1}{3} - 3\frac{2}{3} = 1\frac{2}{3}$
6. $4\frac{1}{3} - 2\frac{2}{3} = 1\frac{2}{3}$
7. $8\frac{2}{4} - 4\frac{3}{4} = 3\frac{3}{4}$
8. $8\frac{1}{8} - 6\frac{4}{8} = 1\frac{5}{8}$
9. $6\frac{1}{3} - 4\frac{2}{3} = 1\frac{2}{3}$
10. $5\frac{5}{10} - 1\frac{6}{10} = 3\frac{9}{10}$
