SOUND COUNTERS TO CUT OUT

Name: ..... **Date:** .....

Cut out the counters and keep them in an envelope with the strips. A child pushes one counter into a box for each sound they hear, left to right, before any letters are written. Plain counters are for consonant sounds and shaded ones for vowel sounds, which makes it easy to see that every word needs a vowel.

Say the word, push the counters, then say it again touching each counter. Only when that is right does the child swap each counter for the letter or letters that spell that sound.
