SCHWA RECORD SHEET

Name: ..... **Date:** .....

One column per child. Write a name at the top of each column, turned sideways, then date each cell as the skill is secure. The eight rows are in teaching order, so a child's column should fill from the top down. Use a dash for seen but not secure and a check for secure.

Skill								
1. Claps syllables and names the stressed one								
2. Hears the schwa in a two-syllable word								
3. Names the vowel letter spelling the schwa								
4. Sorts a, e, i, o, u schwa spellings								
5. Uses the careful spelling voice								
6. Uses a clue word (definite / definition)								
7. Handles -le, -el, -il, -al endings								
8. Finds both schwas in a longer word								

NOTES

Reading the grid. A child stuck on row 1 will fail every row below it, because the schwa cannot be found until the stress can. If rows 1 and 2 are secure but row 3 is not, the problem is spelling memory rather than hearing, so move to the clue-word and dictation sheets rather than more listening work.
