# FRACTION OF A SET

**Name:** ..... **Date:** .....

A fraction can name part of a **group** too. For the first kind, write what fraction of the group is shaded. For the second kind, circle that fraction of the objects and write how many that is.

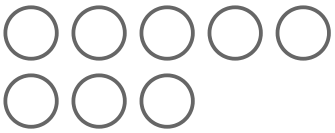

**1**

shaded

$\frac{\square}{\square}$

**2**

circle $\frac{3}{4}$ of them

= ☐ **circles**

**3**

shaded

$\frac{\square}{\square}$

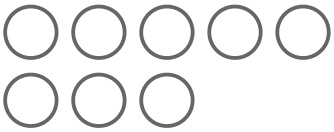

**4**

shaded

$\frac{\square}{\square}$

**5**

circle $\frac{1}{2}$ of them

= ☐ **circles**

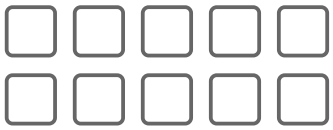

**6**

circle $\frac{1}{3}$ of them

= ☐ **stars**

**7**

circle $\frac{1}{2}$ of them

= ☐ **squares**

**8**

shaded

$\frac{\square}{\square}$

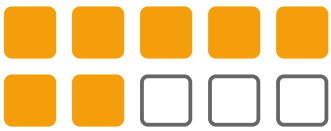

**9**

circle $\frac{1}{3}$ of them

= ☐ **stars**

**10**

shaded

$\frac{\square}{\square}$

**Tip:** to find $\frac{1}{3}$ of 6 stars, share the 6 stars into 3 equal groups. One group is one third.

# FRACTION OF A SET ANSWER KEY

Name: ..... Date: .....

A fraction can name part of a **group** too. For the first kind, write what fraction of the group is shaded. For the second kind, circle that fraction of the objects and write how many that is.

1.  shaded $\frac{4}{6}$

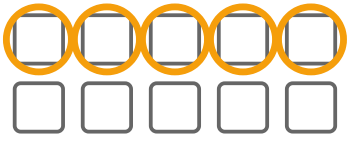

2.  circle $\frac{3}{4}$ of them = 6 circles

3.  shaded $\frac{1}{4}$

4.  shaded $\frac{3}{8}$

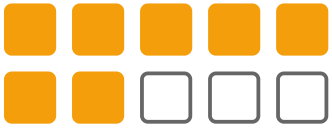

5.  circle $\frac{1}{2}$ of them = 4 circles

6.  circle $\frac{1}{3}$ of them = 2 stars

7.  circle $\frac{1}{2}$ of them = 5 squares

8.  shaded $\frac{2}{5}$

9.  circle $\frac{1}{3}$ of them = 3 stars

10.  shaded $\frac{7}{10}$
