# LONG DIVISION: 2-DIGIT ÷ 1-DIGIT

**Name:** ..... **Date:** .....

Set out each division in the bracket. Divide the tens, multiply, subtract, bring down the ones, and divide again. Write the quotient on the line above.

**Worked example, 96 ÷ 4:** 4 into 9 goes **2** (write 2 above the 9). 2 × 4 = 8, 9 - 8 = 1. Bring down the 6 to make 16. 4 into 16 goes **4**. 16 - 16 = 0. Answer **24**. Check: 24 × 4 = 96.

| | | | |
|---|---|---|---|
| $4\overline{)60}$ | $2\overline{)46}$ | $2\overline{)48}$ | $4\overline{)68}$ |
| $2\overline{)94}$ | $2\overline{)64}$ | $4\overline{)92}$ | $5\overline{)80}$ |
| $4\overline{)88}$ | $2\overline{)66}$ | $2\overline{)76}$ | $3\overline{)42}$ |

# LONG DIVISION: 2-DIGIT ÷ 1-DIGIT

**ANSWER KEY**

**Name:** ..... **Date:** .....

Quotients are shown above each bracket, with the check multiplication underneath.

**15**
$4\overline{)60}$
4 × 15 = 60

**23**
$2\overline{)46}$
2 × 23 = 46

**24**
$2\overline{)48}$
2 × 24 = 48

**17**
$4\overline{)68}$
4 × 17 = 68

**47**
$2\overline{)94}$
2 × 47 = 94

**32**
$2\overline{)64}$
2 × 32 = 64

**23**
$4\overline{)92}$
4 × 23 = 92

**16**
$5\overline{)80}$
5 × 16 = 80

**22**
$4\overline{)88}$
4 × 22 = 88

**33**
$2\overline{)66}$
2 × 33 = 66

**38**
$2\overline{)76}$
2 × 38 = 76

**14**
$3\overline{)42}$
3 × 14 = 42
