LONG DIVISION WITH REMAINDERS

Name: ..... **Date:** .....

These do not divide exactly. Work as before and write what is left at the end as a remainder, like 7 r 3. The remainder is always smaller than the divisor.

Worked example, 59 ÷ 7: 7 into 5 does not go, so look at 59. 7 × 8 = 56 is the closest without going over. Write **8** above the 9, 59 - 56 = **3**. Answer **8 r 3**. Check: 8 × 7 + 3 = 59.

$5\overline{)76}$	$2\overline{)59}$	$6\overline{)94}$	$8\overline{)89}$
$4\overline{)47}$	$4\overline{)81}$	$3\overline{)88}$	$2\overline{)87}$
$5\overline{)82}$	$3\overline{)70}$	$7\overline{)90}$	$4\overline{)49}$

LONG DIVISION WITH REMAINDERS

ANSWER KEY

Name: ..... **Date:** .....

Quotients are shown above each bracket, with the check multiplication underneath.

$5\overline{)76}$ = $15_{r\ 1}$

5 × 15 = 75, 76 - 75 = 1

$2\overline{)59}$ = $29_{r\ 1}$

2 × 29 = 58, 59 - 58 = 1

$6\overline{)94}$ = $15_{r\ 4}$

6 × 15 = 90, 94 - 90 = 4

$8\overline{)89}$ = $11_{r\ 1}$

8 × 11 = 88, 89 - 88 = 1

$4\overline{)47}$ = $11_{r\ 3}$

4 × 11 = 44, 47 - 44 = 3

$4\overline{)81}$ = $20_{r\ 1}$

4 × 20 = 80, 81 - 80 = 1

$3\overline{)88}$ = $29_{r\ 1}$

3 × 29 = 87, 88 - 87 = 1

$2\overline{)87}$ = $43_{r\ 1}$

2 × 43 = 86, 87 - 86 = 1

$5\overline{)82}$ = $16_{r\ 2}$

5 × 16 = 80, 82 - 80 = 2

$3\overline{)70}$ = $23_{r\ 1}$

3 × 23 = 69, 70 - 69 = 1

$7\overline{)90}$ = $12_{r\ 6}$

7 × 12 = 84, 90 - 84 = 6

$4\overline{)49}$ = $12_{r\ 1}$

4 × 12 = 48, 49 - 48 = 1
