LONG DIVISION: 3-DIGIT ÷ 1-DIGIT

Name: ..... **Date:** .....

Start with the hundreds. If the divisor does not go into the first digit, use the first two digits instead. Keep the columns lined up as you bring down.

Remember the four steps: Divide, Multiply, Subtract, Bring down. Repeat until every digit has been brought down. If the divisor is bigger than the first digit, put nothing above it and use two digits.

$9\overline{)954}$ $2\overline{)864}$ $4\overline{)520}$

$2\overline{)416}$ $3\overline{)582}$ $3\overline{)543}$

$2\overline{)650}$ $5\overline{)645}$ $2\overline{)492}$

LONG DIVISION: 3-DIGIT ÷ 1-DIGIT

ANSWER KEY

Name: ..... **Date:** .....

Quotients are shown above each bracket, with the check multiplication underneath.

106
$9 \overline{)954}$
9 × 106 = 954

432
$2 \overline{)864}$
2 × 432 = 864

130
$4 \overline{)520}$
4 × 130 = 520

208
$2 \overline{)416}$
2 × 208 = 416

194
$3 \overline{)582}$
3 × 194 = 582

181
$3 \overline{)543}$
3 × 181 = 543

325
$2 \overline{)650}$
2 × 325 = 650

129
$5 \overline{)645}$
5 × 129 = 645

246
$2 \overline{)492}$
2 × 246 = 492
