3-DIGIT LONG DIVISION WITH REMAINDERS

Name: ..... **Date:** .....

Divide as usual. When you have brought down the last digit and subtracted, what is left is the remainder. Write it as r after the quotient.

Check your answer: quotient × divisor + remainder should give you back the dividend. If the remainder is bigger than the divisor, the quotient is too small.

$7\overline{)727}$ $5\overline{)789}$ $2\overline{)811}$

$2\overline{)461}$ $4\overline{)477}$ $4\overline{)835}$

$6\overline{)507}$ $2\overline{)913}$ $7\overline{)932}$

3-DIGIT LONG DIVISION WITH REMAINDERS ANSWER KEY

Name: ..... **Date:** .....

Quotients are shown above each bracket, with the check multiplication underneath.

$103_{r\ 6}$

$7\overline{)727}$

7 × 103 = 721, 727 - 721 = 6

$157_{r\ 4}$

$5\overline{)789}$

5 × 157 = 785, 789 - 785 = 4

$405_{r\ 1}$

$2\overline{)811}$

2 × 405 = 810, 811 - 810 = 1

$230_{r\ 1}$

$2\overline{)461}$

2 × 230 = 460, 461 - 460 = 1

$119_{r\ 1}$

$4\overline{)477}$

4 × 119 = 476, 477 - 476 = 1

$208_{r\ 3}$

$4\overline{)835}$

4 × 208 = 832, 835 - 832 = 3

$84_{r\ 3}$

$6\overline{)507}$

6 × 84 = 504, 507 - 504 = 3

$456_{r\ 1}$

$2\overline{)913}$

2 × 456 = 912, 913 - 912 = 1

$133_{r\ 1}$

$7\overline{)932}$

7 × 133 = 931, 932 - 931 = 1
