DIVISION BEAD BOARD

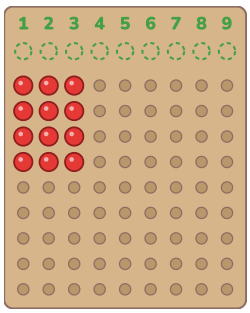

Name: ..... **Date:** .....

Print on card. The green numbers along the top are the divisor: stand one skittle in a dotted circle for each. Share the beads (the dividend) one row at a time under the skittles. When every row is complete, the number of beads in one column is the answer; anything left over is the remainder.

Worked example

12 ÷ 3

Three skittles under 1, 2, 3. Twelve beads shared one row at a time make four full rows, so 12 ÷ 3 = 4, nothing left over.

You need 81 green beads and 9 skittles (clothes pegs or buttons work). Skittles stand in the dotted circles.
