MULTIPLY FRACTIONS WITH AREA MODELS

Name: ..... **Date:** .....

Each square is one whole, cut into columns for the first fraction and rows for the second. Shade the columns, shade the rows, and the part shaded **twice** is the product. Count the small pieces to write it.

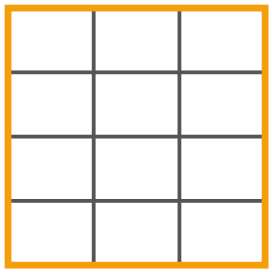

1

$\frac{1}{2} \times \frac{1}{3} = \frac{\square}{\square}$

Shade $\frac{1}{2}$ of the columns one way and $\frac{1}{3}$ of the rows the other way.

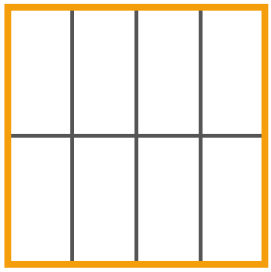

2

$\frac{2}{3} \times \frac{3}{4} = \frac{\square}{\square}$

Shade $\frac{2}{3}$ of the columns one way and $\frac{3}{4}$ of the rows the other way.

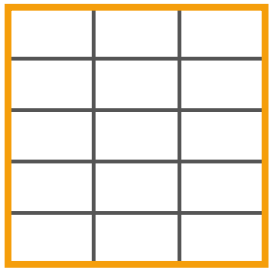

3

$\frac{3}{4} \times \frac{1}{2} = \frac{\square}{\square}$

Shade $\frac{3}{4}$ of the columns one way and $\frac{1}{2}$ of the rows the other way.

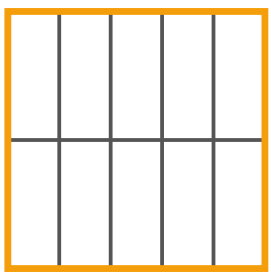

4

$\frac{1}{3} \times \frac{2}{5} = \frac{\square}{\square}$

Shade $\frac{1}{3}$ of the columns one way and $\frac{2}{5}$ of the rows the other way.

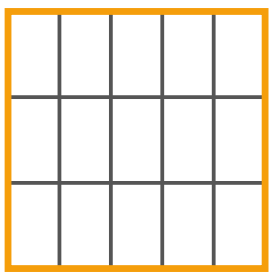

5

$\frac{2}{5} \times \frac{1}{2} = \frac{\square}{\square}$

Shade $\frac{2}{5}$ of the columns one way and $\frac{1}{2}$ of the rows the other way.

6

$\frac{3}{5} \times \frac{2}{3} = \frac{\square}{\square}$

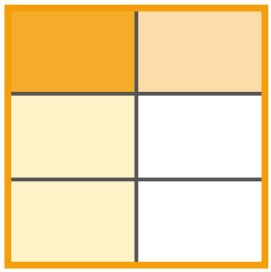

Shade $\frac{3}{5}$ of the columns one way and $\frac{2}{3}$ of the rows the other way.

MULTIPLY FRACTIONS WITH AREA MODELS ANSWER KEY

Name: ..... **Date:** .....

Each square is one whole, cut into columns for the first fraction and rows for the second. Shade the columns, shade the rows, and the part shaded **twice** is the product. Count the small pieces to write it.

1

$\frac{1}{2} \times \frac{1}{3} = \frac{1}{6}$

1 of 2 columns and 1 of 3 rows overlap in **1** of **6** pieces.

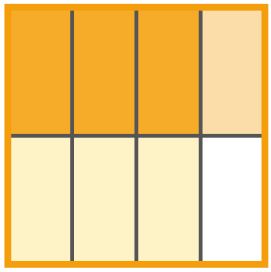

2

$\frac{2}{3} \times \frac{3}{4} = \frac{6}{12}$

2 of 3 columns and 3 of 4 rows overlap in **6** of **12** pieces.

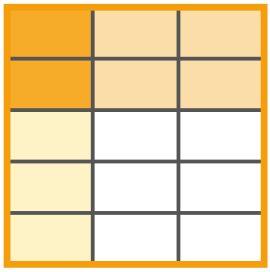

3

$\frac{3}{4} \times \frac{1}{2} = \frac{3}{8}$

3 of 4 columns and 1 of 2 rows overlap in **3** of **8** pieces.

4

$\frac{1}{3} \times \frac{2}{5} = \frac{2}{15}$

1 of 3 columns and 2 of 5 rows overlap in **2** of **15** pieces.

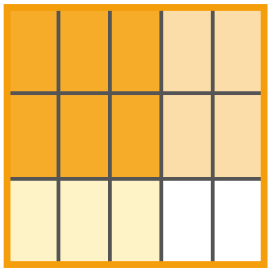

5

$\frac{2}{5} \times \frac{1}{2} = \frac{2}{10} = \frac{1}{5}$

2 of 5 columns and 1 of 2 rows overlap in **2** of **10** pieces.

6

$\frac{3}{5} \times \frac{2}{3} = \frac{6}{15}$

3 of 5 columns and 2 of 3 rows overlap in **6** of **15** pieces.
