CROSS-CANCEL, THEN MULTIPLY

Name: ..... **Date:** .....

Before you multiply, look diagonally: if a numerator and the **other** fraction's denominator share a factor, divide both by it. Then multiply the smaller numbers.

1. $\frac{3}{4} \times \frac{8}{9} =$ ☐

2. $\frac{2}{5} \times \frac{5}{6} =$ ☐

3. $\frac{4}{7} \times \frac{7}{8} =$ ☐

4. $\frac{5}{6} \times \frac{3}{10} =$ ☐

5. $\frac{3}{8} \times \frac{4}{9} =$ ☐

6. $\frac{7}{10} \times \frac{5}{14} =$ ☐

7. $\frac{2}{3} \times \frac{9}{10} =$ ☐

8. $\frac{5}{12} \times \frac{6}{7} =$ ☐

9. $\frac{4}{9} \times \frac{3}{8} =$ ☐

10. $\frac{9}{10} \times \frac{5}{6} =$ ☐

11. $\frac{3}{5} \times \frac{10}{11} =$ ☐

12. $\frac{6}{7} \times \frac{7}{12} =$ ☐

Worked example: $\frac{3}{4} \times \frac{8}{9}$. The 3 and the 9 share 3 (3 → 1, 9 → 3). The 8 and the 4 share 4 (8 → 2, 4 → 1). Now $\frac{1}{1} \times \frac{2}{3} = \frac{2}{3}$.

CROSS-CANCEL, THEN MULTIPLY

ANSWER KEY

Name: ..... Date: .....

Before you multiply, look diagonally: if a numerator and the **other** fraction's denominator share a factor, divide both by it. Then multiply the smaller numbers.

1. $\frac{3}{4} \times \frac{8}{9} = \frac{2}{3}$
2. $\frac{2}{5} \times \frac{5}{6} = \frac{1}{3}$
3. $\frac{4}{7} \times \frac{7}{8} = \frac{1}{2}$
4. $\frac{5}{6} \times \frac{3}{10} = \frac{1}{4}$
5. $\frac{3}{8} \times \frac{4}{9} = \frac{1}{6}$
6. $\frac{7}{10} \times \frac{5}{14} = \frac{1}{4}$
7. $\frac{2}{3} \times \frac{9}{10} = \frac{3}{5}$
8. $\frac{5}{12} \times \frac{6}{7} = \frac{5}{14}$
9. $\frac{4}{9} \times \frac{3}{8} = \frac{1}{6}$
10. $\frac{9}{10} \times \frac{5}{6} = \frac{3}{4}$
11. $\frac{3}{5} \times \frac{10}{11} = \frac{6}{11}$
12. $\frac{6}{7} \times \frac{7}{12} = \frac{1}{2}$

Check: every answer is already in lowest terms because the common factors were removed first.
