READING AN ELEMENT SQUARE

Name: ..... **Date:** .....

Part 1: name the four parts of the element square and say what each tells you. Part 2: complete the eight squares. Every fact you need is in the element bank.

PART 1: THE FOUR PARTS

Every square on the periodic table has the same layout.

The atomic number is a whole number and is unique to the element.

The atomic mass is usually a decimal because it is an average over the atoms found in nature.

Letter	Name of this part	What it tells you
A		
B		
C		
D		

PART 2: COMPLETE THE SQUARES

1 ____ **H** _____ _____

2 **6** _____ _____ _____

3 ____ _____ Nitrogen _____

4 ____ _____ _____ 22.99

5 ____ **Cl** _____ _____

6 ____ _____ Iron _____

7 **29** _____ _____ _____

8 ____ _____ _____ 196.97

ELEMENT BANK

Gold, Au, 79, 196.97 · Carbon, C, 6, 12.01 · Chlorine, Cl, 17, 35.45 · Hydrogen, H, 1, 1.008 · Sodium, Na, 11, 22.99 · Iron, Fe, 26, 55.85 · Nitrogen, N, 7, 14.01 · Copper, Cu, 29, 63.55

READING AN ELEMENT SQUARE ANSWER KEY

Name: ..... **Date:** .....

PART 1: THE FOUR PARTS

A = Atomic number: the number of protons (and of electrons in a neutral atom); B = Chemical symbol: one or two letters, the first always a capital; C = Element name; D = Atomic mass: the average mass of one atom; roughly protons + neutrons

A | Atomic number | the number of protons in one atom (and of electrons in a neutral atom)

B | Chemical symbol | the one- or two-letter abbreviation used in formulas

C | Element name | the name of the element

D | Atomic mass | the average mass of one atom, roughly protons + neutrons

PART 2: COMPLETE THE SQUARES

1. Hydrogen (H), atomic number 1, atomic mass 1.008; 2. Carbon (C), atomic number 6, atomic mass 12.01; 3. Nitrogen (N), atomic number 7, atomic mass 14.01; 4. Sodium (Na), atomic number 11, atomic mass 22.99; 5. Chlorine (Cl), atomic number 17, atomic mass 35.45; 6. Iron (Fe), atomic number 26, atomic mass 55.85; 7. Copper (Cu), atomic number 29, atomic mass 63.55; 8. Gold (Au), atomic number 79, atomic mass 196.97
