# METALS AND NON-METALS

**Name:** ..... **Date:** .....

Part 1: write each element in the correct column. Part 2: complete the table. Part 3: complete the sentences.

## PART 1: METAL, NON-METAL OR METALLOID?

**iron · oxygen · copper · silicon · sulfur · gold · carbon · aluminium · chlorine · boron · sodium · neon · zinc · nitrogen · magnesium · germanium · hydrogen · silver**

| Metals | Non-metals | Metalloids |
|---|---|---|
| | | |

## PART 2: COMPARE THE PROPERTIES

| Property | Metals | Non-metals |
|---|---|---|
| Shiny or dull? | | |
| Conducts electricity? | | |
| Conducts heat? | | |
| Can be hammered into shape (malleable) or brittle? | | |
| State at room temperature | | |
| Where on the periodic table? | | |

## PART 3: METALLOIDS

1. A metalloid has some properties of metals and some of non-metals. On the periodic table the metalloids sit along the _____ line.
2. Silicon conducts electricity a little, so it is used to make _____.

For non-commercial, education use only 

# METALS AND NON-METALS ANSWER KEY

**Name:** ..... **Date:** .....

## PART 1: METAL, NON-METAL OR METALLOID?

Metals: iron, copper, gold, aluminium, sodium, zinc, magnesium, silver

Non-metals: oxygen, sulfur, carbon, chlorine, neon, nitrogen, hydrogen

Metalloids: silicon, boron, germanium

## PART 2: COMPARE THE PROPERTIES

Shiny or dull? | shiny (lustrous) | dull

Conducts electricity? | yes | no (graphite, a form of carbon, is the exception)

Conducts heat? | yes, well | poorly

Malleable or brittle? | malleable | brittle (solids snap)

State at room temperature | solid (except mercury, a liquid) | solid, liquid or gas; many are gases

Where on the table? | left and centre | right (and hydrogen at top left)

## PART 3: METALLOIDS

1. staircase 2. computer chips (semiconductors)
